

How to measure a "L" shape Splashback

The aim is to have the glass sit onto the worktop or upstand and have a 2mm gap in the horizontal and 3mm gap in the vertical. Small gaps can be sealed with clear silicone.

Step 1.

Please write down the exact measurements for each label (we will deduct tolerances).

Step 2.

Check if $C + D = B$ are the same width

Check if $E + G = A$ are the same height

Step 3.

Please email labelled measurements to admin@meandmyglass.co.uk. We will put these measurements into a drawing and email it back to you for checking.
