

Measuring glass for inside alcove

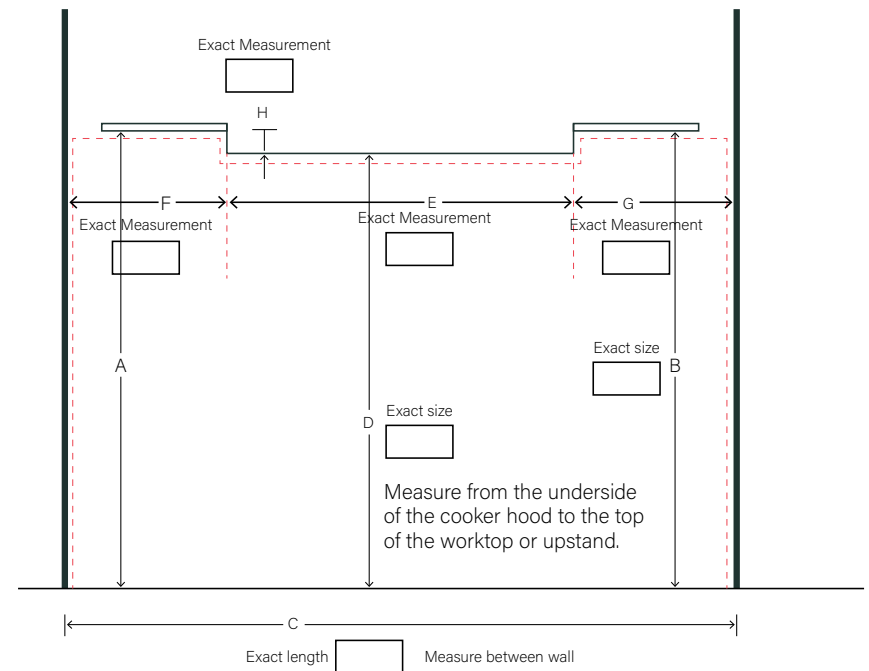

Check reveals are square:
Use a set square or something
with a known 90 degrees A4 card or similar

If the reveal is square the
measurement is 0

How to measure a "U" shaped cooker hood

The aim is to have the glass sit directly onto the worktop or
upstand and have a 2mm gap in the horizontal and 3mm gap
in the vertical. Small gaps can be sealed with clear silicone.

Please email labelled measurements to
admin@meandmyglass.co.uk. We will put these measurements
into a drawing and email it back to you for checking.
