

How to measure for your Glass Splashback

Basic square / rectangle shape

Most splashbacks will require two simple measurements, A & B. However, we suggest you **measure all four distances (A, B, C & D)** to see if there is any significant discrepancy.

If there are no significant discrepancy, then use our [online calculator to get a quote and purchase](#)

(Option 1):

If they are minor (less than 3mm) simply enter the shorter measurements into our online calculator when purchasing.

(Option 2):

If you want the splashback to fit perfectly then firstly enter the shorter measurements into our online calculator when purchasing. Once ordered simply send us your actual measurements and we will cut the splashback to fit your space. Email admin@meandmyglass.co.uk and mention the order number.

Note:

Please allow 3mm off all measurements. The glass industry works to a tolerance of +/- 2mm so this ensures the glass will fit. Any slight gaps can be filled with sealant.
